Project Ideas

By Jada Forrester

Language Guessing game
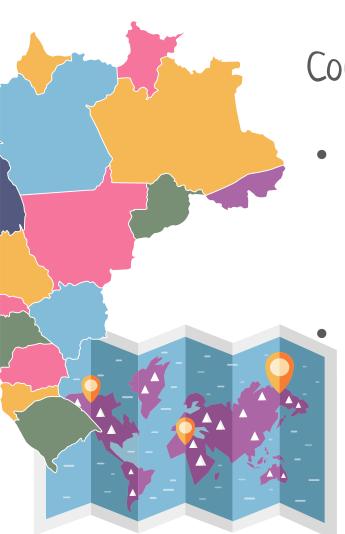

- Making a guessing game with pictures and or symbols similar to duolingo
  - Some language(s) i might choose to cover are spanish, mandarin, korean, japanese or arabic
- Saving points accrued by players and maybe including a timer to see how long it takes for them to complete the level
  - Or implementing a timer for it to run out
- Using state to make the symbols/ images of the correct answers change with being picked

Country Guessing Game

- Making a country guessing game where i'll display a name of a region or country and have users try to click on the map to find the country
  - Add a timer for users to guess the country before it runs out
    - Timer adds more time if they guess the country correctly
- Using state to make the map change with more areas being picked
